Boise Kidney & Hypertension Institute Begins New Era With New Administrator

Boise Kidney and Hypertension Institute welcomes acclaimed healthcare CEO as new Practice Administrator. David Tupper brings 20-plus years of healthcare management expertise to the new administrator post.

Boise Kidney and Hypertension Institute has selected David Tupper as their new Practice Administrator. Tupper takes on the responsibilities of physician recruiting, advancing administrative processes and further establishing Boise Kidney as the regional leader in nephrology, hypertension and related disorders.

“Adding David to our team makes our outstanding staff even more impressive,” stated the Managing Partner Amit Sharma, MD, FACP, FASN. “David’s extraordinary skills in practice management, and years as a hospital executive, will enhance our ability to provide exceptional patient care – now and into the future.”

David is a graduate of Michigan’s Ferris State University, and holds degrees in Finance and Economics. His three decades of healthcare management includes nine years as hospital CEO. His accomplishments include the successful launch of five acute care hospitals in Arizona, Texas and Idaho. Since making Idaho his home in 2007, David has spearheaded the launch of an acute care facility in Meridian, Complex Care Hospital. The Institute believes the addition of David Tupper will further solidify their position as the Treasure Valley’s premier center for research, diagnosis and care of kidney disorders and hypertension.

Boise Kidney and Hypertension Institute is led by a team of nationally respected physicians specializing in nephrology: the diagnosis, study and treatment of kidney disease. With a large support staff of care providers, the institute provides early diagnosis, treatment and care of patients at risk for, or suffering from, chronic kidney disease and hypertension. With its affiliate, Liberty Dialysis, the institute also provides state-of-the-art dialysis services to the Southern Idaho and Eastern Oregon Region.
